ABOUT

While working as a manager at a restaurant chain, I was coding in my free time. I got involved too much into it that when I came back to the US, I decided to enroll in Galvanize's full stack program: web developer immersive. During the program I became more familiar with the technology, the pieces got together and I built up a better understanding of the languages and libraries used to build a app: React, React-Native, HTML, CSS, JavaScript, Node.js, express, jQuery, SQL, and more.

PROJECTS

JOB APP

React, React Native, XCode, axios, Redux

- This app was implemented with Indeed API and google maps. It searches for jobs based on a zip code. *See it here*

JOB APP

tripineer - localhost

JavaScript, jQuery, PostgreSQL, Heroku, GIT/Github, materialize, oath

- This group project was designed to provide and save info about activities and restaurants into their personal account when people take a vacation. *See it here.*

EXPERIENCE

Restaurant chain - With more than 15 years of management within the food industry, I was responsible for operations management with focus on customer service and the expansion of the franchise, which was successfully achieved. Interviewing, hiring, training, coaching, developing, ordering, scheduling, were some of my duties.
